

Orthopedic Care

Reclaiming your **independence**.

The rehabilitative services you need following orthopedic surgery are often just as important as the procedure itself. Research shows that in-home recovery is not only **more comfortable** for patients but also more **cost-effective**, and most importantly, can result in less readmissions and **better outcomes**.

Prevention

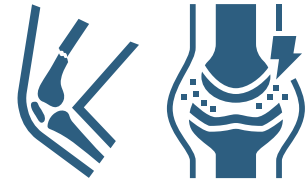

Our number one goal is to provide our ortho patients with **quality** home care that allows them to heal and recover while also avoiding preventable complications or hospital readmissions.

Pain Relief

If joint pain has slowed you down, we can help you heal in the comfort of your own home. We offer expert care to provide you relief from pain or recovery for a broken bone or post-orthopedic surgery.

Rebuild Strength

Our ortho care team has over **30 years** of collective experience, offering patients expert rehabilitation services so they can recover quickly and regain their **strength and independence**. We provide treatment plans that follow ortho protocol.

At **InHome Healthcare Services**, our community of **local** clinicians and therapists are committed to providing you with the best care that leads to better outcomes, improving your **joint + bone health** & overall quality of life.
